

Design Brief — Default Energy Hippo / EEM Suite Theme

PREPARED BY Energy Hippo implementation team

The out-of-the-box look that ships when **no customer branding** is applied — the baseline that per-customer skins (e.g. Northlake University) override via the same hooks/variables. Paste the block below into Claude (design + image generation).

Grounded in the current app: default CustomLoginInfo strings, the EEM email `_Layout.html` palette/tokens, the energyhippo-icons set, and the `.auth-branding__figure` / `.k-loading-mask` integration points.

You are designing the **default Energy Hippo / EEM Suite** theme — the shippable, out-of-the-box look used when a customer has no custom branding. It is the baseline that per-customer skins override (same CSS hooks + `--color-*` variables). Refresh and modernize the existing Energy Hippo identity; keep it clean, professional, and consistent across login, email, and animations. Synthetic/internal is fine.

BRAND — Energy Hippo / EEM Suite™ (a Univerus company), grounded in the live app:

- Signature **orange** #F5811F; deeper **red-orange** #EB4623 (eyebrows/buttons); near-black **charcoal** #231F20 (ink/headers); **teal** #3C7088 / #4F9CBC (links/kicker); warm off-white **canvas** #EFECE6; grays #6B7280, #9CA3AF. Typeface **Open Sans**.
- **Mark:** the Energy Hippo hippo. **Wordmark:** "EEM Suite" with an "Energy Hippo · a Univerus company" lockup. Design a clean hippo mark + wordmark that harmonizes with the existing energyhippo-icons style (attach the current logo if you have it for continuity).

LICENSE RULE: any dependency must be MIT or Apache-2.0 (Lottie/Lottie-web is MIT for the animations); **no GSAP/GreenSock**. State the library + license.

Produce the default theme kit (mirror the per-customer kit structure):

1. LOGOS & IMAGES

- Master Energy Hippo / EEM Suite logo — SVG + reversed/white.
- LoginLogoRight.png — default login hero (~800×600), the modern replacement for the legacy EEM-Laptop.png.
- header logo (200×48 transparent, + reversed), email logo white 148×38 (+@2x), favicon-32, app-icon 192 & 512, site.webmanifest (theme #231F20).

2. DEFAULT LOGIN CUSTOMIZATION (CustomLoginInfo defaults) Use the product defaults:

LoginCustomerLogoTitle = "Energy Hippo EEM Suite™"; LoginLaptopCaption = "Make the most of your energy with EEM Suite"; headline "Secure access to EEM Suite" + a short description; **4 product value-prop bullets** (unify all utility data; track cost & usage; sustainability — ENERGY STAR + GHG; tenant rebilling / multi-site); header/background colors from the palette; a "Need help?" footer with Energy Hippo support (support@energyhippo.example.com, a phone, a status URL); CTA → energyhippo.com. Output as ready-to-enter config values + a login-page mockup.

3. EMAIL TEMPLATES (default refresh — keep every token) Refresh the shared `_Layout.html` + the 4 per-email bodies in the default palette (charcoal header, **orange accent bar**, EEM email logo, top-right label "Energy

Management Notification", footer "© {{CurrentYear}} Energy Hippo, Inc. · A Univerus company. This is an automated message; replies are not monitored."). Preserve EVERY token exactly:

- `_Layout: {{Subject}} {{Preheader}} {{LogoUrl}} {{LogoRedirectUrl}} {{Body}} {{CurrentYear}} {{MachineName}}`
- `Account/PasswordReset: {{ResetUrl}} {{ExpiresIn}}`
- `Account/VerifyEmail: {{VerifyUrl}} {{ExpiresIn}}`
- `Account/EmailChanged: {{NewEmail}} {{ChangedOn}} {{SupportUrl}}`
- `Workflow/Default: {{Subject}} {{Body}}` Each as `.html + .subject.txt + .txt`; keep mobile media queries + table-based, client-safe HTML.

4. ANIMATIONS (default theme — the base customers override)

- Login entrance targeting `.auth-branding__figure`; loading animation overriding `.k-loading-mask` `.k-loading-image` (56×56) and a Lottie full-page splash.
- Energy Hippo motif (a friendly hippo + an energy spark; orange/charcoal/teal), calm and premium. **Lottie (MIT)** + a CSS/SVG fallback; prefers-reduced-motion static state. Provide the Lottie JSONs.

5. THEME LAYER A default `eem-theme-vars.css` setting the `--color-*` custom properties to the Energy Hippo defaults (`--color-primary:#231F20`, `--color-accent:#F5811F`, `--color-tertiary:#3C7088`, etc.) — the **base layer**. Note that customer skins (e.g. `northlake-theme-vars.css`) override these same vars + swap the mark/JSON.

OUTPUT → a `branding-default/` folder:

- `images/custom/` (logos, hero, header/email logos, favicon, app icons, webmanifest)
- `login-customization.md` (default values) + a login mockup
- `email-templates/` (`_Layout.html` + `Account/*` + `Workflow/*`)
- `animations/` (login + loading HTML, Lottie JSONs, `loading-animation.less`, `eem-theme-vars.css`)
- `README.md` — files, where each deploys, and **the library + license**.

This is the shippable default, so it must be production-credible, accessible, and on-brand with the existing Energy Hippo identity. Do not change any `{{token}}`.
