

# Northlake Gateway Setup Coverage

PREPARED BY      Energy Hippo implementation team

---

Generated from the scenario profiles. Each format is a separate acceptance case. No installed setup or ingestion result has been recorded.

| Profile                        | Format        | Destinations                                                         | Measurements | Artifact status | UI setup | Ingestion acceptance |
|--------------------------------|---------------|----------------------------------------------------------------------|--------------|-----------------|----------|----------------------|
| gw_acquisuite_student_electric | ACQUISUITE    | Student Center, Lakeview Residence Hall                              | 4            | Generated       | Not run  | Not run              |

| gw_neptune_river_city_water    | NEPTUNE       | Cedar Row B                                                          | 1            | Planned         | Not run  | Not run              |
| gw_mvrs_sierra_gas             | MVRS          | Student Center                                                       | 1            | Planned         | Not run  | Not run              |
| gw_fig_fixed_network_submeters | FIXEDNETWORKS | Cedar Row A, Cedar Row B, Lakeview Residence Hall, Parking Structure | 128          | Planned         | Not run  | Not run              |

| Profile                         | Format     | Destinations                    | Measurements | Artifact status | UI setup | Ingestion acceptance |
|---------------------------------|------------|---------------------------------|--------------|-----------------|----------|----------------------|
| gw_neptune_cedar_row_submitters | NEPTUNE    | Cedar Row A, Cedar Row B        | 126          | Planned         | Not run  | Not run              |
| hmr_events_publish              | HMR_EVENTS | Neptune and MVRs reading events | 0            | Planned         | Not run  | Not run              |

FIG variants reuse one point in separate restored runs. HMR publishes reading events rather than interval measurements. Catalog entries without a represented runnable component remain outside this list and must be reconciled against the installed product before claiming complete gateway coverage.
