Tenant & Lease Roster (Sub-metering & Rebilling)

DATE October 1, 2026
PREPARED BY Northlake University

Provided by: Northlake Property Management & Housing Operations. Synthetic/ illustrative. This describes the spaces where we **sub-meter and rebill** utility costs — at Cedar Row Apartments (residential, part of this packet) and at the new Northlake Town Center (commercial, a later implementation phase). For each space we note **how the cost is split**, in our own terms; please map these to the appropriate allocation method.

Northlake Town Center (mixed-use, commercial) — later phase

Town Center joins in a later implementation phase and is not part of the current inventory; its spaces are listed now so the allocation design covers them.

A newer mixed-use property: an enclosed retail hall, an office tower, a campus annex, and shared infrastructure. We meter a **master** for each building and allocate/sub-meter down to tenants, then roll everything up to a property total.

Market Hall (retail) — master meter: Mall-Main (electric)

Tenant / space	How we split the cost
Anchor Store	**Fixed** $2,000/month + share of common
Food Court	**15%** of the master bill
In-line Shop 1–4	**By square footage** of each shop
Common Area	the remaining balance

We add a small **overhead** to tenant charges (sometimes folded into the line, sometimes shown separately).

Office Tower — master meter: Tower-Main (electric)

Tenant / space	How we split the cost
Floor 1–4	**By each floor's sub-meter** (fully sub-metered)
Landlord / house	the **remainder** not covered by floor sub-meters

Campus Annex — master meter: Annex-Main (demand-metered)

Tenant / space	How we split the cost
Bldg A / B / C	**By usage and coincident peak demand**

Substation feed — master: Substation-Master

Tenant / space	How we split the cost
Substation 1 / 2	**By percentage of metered usage**

Property Total (cost center)

All tenant charges **roll up** into a single Property Total cost center for ownership reporting.

Cedar Row Apartments (residential)

Two apartment buildings with 124 apartments, the Common House, and a solar carport. Valley Electric and River City bill the property on one electric and one water **master meter** per building; they never bill a resident. We own an electric and a water **submeter in every apartment**: the electric submeters report hourly over the fixed network and the water submeters are read on our monthly handheld route. House submeters cover corridors, laundry and lighting. The Units and Submeters tab of the Data Collection Workbook lists every apartment with its two submeters.

Building	Apartments	Master meters	How we split
Cedar Row A	60	Cedar Row A Electric Master; Cedar Row A Water Master	Electric **by apartment submeter**; water **by apartment submeter**, with sewer on the same usage capped at the apartment's winter average; house submeters recovered as overhead
Cedar Row B	64	Cedar Row B Electric Master; Cedar Row B Water Master	Same approach

The apartment charges plus the house overhead must reconcile to each master bill.

How we generate tenant bills

We produce tenant bills monthly from the allocated amounts, and we **reconcile** the sum of tenant charges back to the master/parent utility bill so nothing is over- or under-recovered. Some spaces we'd want generated automatically each period; others on demand.

Open items

- Confirm final tenant list and lease square footages.
- Confirm the overhead percentage and whether it shows as a separate line.
- Confirm which spaces bill automatically vs on request.
- Confirm whether any tenant is billed on a flat percentage we set manually.
