Northlake University — Onboarding Data Transmittal

DATE October 1, 2026
PREPARED BY Samantha Ireland, Director of Campus Operations

To: Energy & Utility Management Implementation Team
From: Samantha Ireland, Director of Campus Operations, Northlake University
Date: October 1, 2026 — onboarding packet 0.4
Re: Facilities, utility, and reporting data package for new energy management system setup
Planned coverage period: January 1, 2024 – December 31, 2025
First interval delivery: January 15, 2024 — Student Center electricity

Thank you for partnering with us on standing up our new energy and utility management system. This package contains the source material our Facilities, Housing, Finance, and Sustainability teams have assembled to describe how the university is organized and how we want our utility data, billing, cost allocation, and reporting handled.

We have written everything in our own operational terms — properties, sites, buildings, departments, cost centers, utility accounts, service agreements, meters, and measured points. We have intentionally **not** assumed any particular software model; please map our information into your system as part of the design phase and confirm the mapping back to us.

What changed in packet 0.4. The Thermal Plant asked us to bring in **Ridgeline Wind**, the small wind company it bought on July 1, 2024 with university capital funding: ten turbines near Rio Vista whose output the plant buys at an internal transfer price, with Valley Electric metering the connection and crediting the export to the Central Plant's bill. The site is also our Wind Energy Research Lab. This revision adds the site, its accounts, meters and data feeds, a transfer price sheet, the Valley Electric generator schedules, four new users and the bills that show the new charges. Everything else is unchanged from packet 0.3.

What's enclosed

#	Document	Owner team	Purpose
1	Facilities & Utility Overview	Facilities	Narrative of how we're organized
2	Discovery Questionnaire (completed)	Campus Operations	Goals, scope, systems, success criteria
3	Data Collection Workbook (27 tabs) + Facilities and Meter Register	Facilities / Finance	Current hierarchy, inventory, building service profiles, apartment submeters, measurement relationships, rollups and source mapping
4	Rate Tariff Sheets (6 providers)	Finance	Our utility rate schedules and agreements (17 across the six providers, Ridgeline's transfer price included)
5	Chart of Accounts & GL Coding Guide	Finance / AP	How we want utility costs coded

#	Document	Owner team	Purpose
6	User Access Request	HR / IT	Who needs access and to what
7	Tenant & Lease Roster	Housing / Property Mgmt	Sub-metered/allocated tenant spaces
8	Sustainability Reporting Requirements	Sustainability Office	ENERGY STAR, emissions, targets
9	Source System Inventory	IT / Facilities	Data feeds, formats, delivery cadence
10	Student Center AcquiSuite delivery files	Facilities	Complete day, missing block and replacement readings with expected totals
—	Utility bills, thermal allocations, solar invoices	Finance	Itemized sample statements on each provider's own read cycle, priced at the tariffs (replacing the earlier illustrations)
—	Ridgeline bills: Valley Electric generator bills, a Central Plant bill with the transfer credit, the hand-made July 2024 transfer statement	Thermal Plant accounting	New in 0.4, itemized; the July statement is what EEM's generated statement must match

How we're organized (quick orientation)

- **Northlake Main Campus** — academic campus: Admin Hall, Science Center, Library, Student Center, Lakeview Residence Hall, the Recreation and Aquatics Center, the Parking Structure and Campus Grounds, with onsite solar.
- **Northlake Thermal Plant** — our central plant (chilled water and steam), run as its own operating company with its own contact. It buys its own electricity, gas and water and allocates its cost to the campus buildings it serves. Since July 2024 it also owns the **Ridgeline Wind Site**: ten 660 kW turbines, a met mast and a substation near Rio Vista.
- **Cedar Row Apartments** — nearby student housing (Cedar Row A and B, 124 apartments), the Common House, and a solar carport with grounds. Each building is master-metered and we own an electric and a water submeter in every apartment; the utility never bills a resident.
- **Northlake Town Center** — a later implementation phase for our mixed-use property (retail, an office tower, a campus annex, and shared infrastructure) where we sub-meter and rebill tenants.

Primary contacts

Area	Contact	Role
Overall / sponsor	Samantha Ireland	Director of Campus Operations
Facilities & meters	Jordan Hale	Facilities Systems Manager
Utility finance & rates	Priya Nandakumar	Energy Finance Lead
Bill processing	Iris Morales / Nora Chen	Bill Entry / Bill Import
Housing	Maya Chen	Cedar Row Property Manager
Thermal plant (its own operating company)	Devon Brooks	Thermal Plant Manager
Ridgeline Wind (the plant's wind company)	Mateo Alvarez	Ridgeline Wind Site Manager

Area	Contact	Role
Wind Energy Research Lab	Elena Vasquez	Lab Director, Mechanical Engineering
Sustainability	Leo Martinez	Sustainability Analyst

The **Contacts** tab in the Data Collection Workbook contains the full directory with email addresses, phone numbers, company ownership and utility-provider representatives. **Departments & Responsibilities** identifies each department's organization and primary contact. **Hierarchy** lists, for each of our three operating companies, its sites and buildings; a building appears once, under the company that owns its site, and **Meters** and **Measured Points** list what sits beneath it. **Units and Submeters** lists every Cedar Row apartment with its electric and water submeter. Source-system and tenant/lease inventories are tabs in that same workbook.

A few things to know up front

- Identifiers in this package (account numbers, meter tags, addresses) are our internal references and may need normalizing on your side.
- We have flagged **known events** (a meter replacement, an estimated-then- corrected bill, an account-number change, a rate change, etc.) so they can be handled intentionally during loading rather than treated as errors.
- Several items are still marked **open** for our teams to confirm; see the Open Items list in the overview and workbook.
- Start with Student Center electricity, then expand across the supplied inventory. Other source-format samples and the full historical dataset will follow; a documented feed does not mean its files have been delivered yet.

We look forward to the design review. Please direct questions to me or the area contacts above.

Samantha Ireland Director of Campus Operations, Northlake University
