Rate Sheet — Northlake Thermal Plant (Internal Cost Allocation)

DATE October 1, 2026
PREPARED BY Northlake University

Provided by: Northlake University Finance + Thermal Plant. Synthetic/illustrative values for setup. The thermal plant is **university-owned** and runs as its own operating company, Northlake Thermal Plant — there is no external utility account for chilled water or steam. It produces chilled water (cooling) and steam (heating) and **allocates its operating cost** to the buildings it serves, using internal cost centers and submetered consumption.

Effective Jan 1, 2024 – Dec 31, 2025

Chilled Water Cost Allocation (NTP-ALLOC-CHW)

Charge	Basis	Rate
Consumption	per ton-hour	$0.168
Demand	per ton per month (peak)	$9.50

Served (sub-metered) buildings: Science Center and Recreation and Aquatics Center (hourly ton-hours and tons).

Steam Cost Allocation (NTP-ALLOC-STEAM)

Charge	Basis	Rate
Consumption	per klb (thousand lb steam)	$14.20

Served buildings: Science Center, Admin Hall, Library, Student Center, Lakeview Residence Hall, Recreation and Aquatics Center.

Notes for setup:

- These behave like monthly "bills" against internal **cost centers** (one per served building, six in all), not utility accounts — please roll them up alongside utility costs.
- The plant holds its own utility accounts at the Central Plant: Valley Electric (chiller power, VED-TOU-PRI), Sierra Gas (boiler fuel, SGU-GL-1) and River City (makeup water, RCU-W-TIER and RCU-S-VOL). Its electricity and gas tie its emissions to delivered thermal energy.
- Cooling demand is seasonal and peaks on summer afternoons.
- **Open:** confirm the allocation rule for steam-only buildings.
