Transfer Price Sheet — Ridgeline Wind (Wind Generation)

DATE October 1, 2026
PREPARED BY Northlake University

Provided by: Northlake Thermal Plant accounting with University Finance. Synthetic/illustrative values for setup. Ridgeline Wind is **our own** wind company: the Thermal Plant bought it on July 1, 2024 with university capital funding. Ten 660 kW turbines (6.6 MW) stand in the Montezuma Hills near Rio Vista, about fifty miles southwest of campus, and the site doubles as the Mechanical Engineering department's Wind Energy Research Lab.

The plant buys all of Ridgeline's output at an internal transfer price. Nobody mails this bill: we want EEM to **generate** the monthly statement from the ten turbine pad meters.

Agreement: Ridgeline Internal Energy Transfer (RWL-XFER-2024)

Effective Jul 1, 2024 – Dec 31, 2025

Item	Basis	Value
Transfer energy	per kWh metered at the turbine pads	$0.058
Research lab credit	per month, for the lab's use of the site	−$1,250.00
Renewable energy certificates (RECs)	ownership	**Northlake retains**

The monthly statement = transfer energy (sum of the ten turbine meters) − the research lab credit. It posts as a journal between the plant and Ridgeline: no payment leaves the plant company.

Account: SYN-RWL-G-0000001, one transfer agreement for the whole farm, at Ridgeline Turbine Field. Turbine meters SYN-RWL-M-0110001 to SYN-RWL-M-0110010; each carries its position tag, RWL-WTG-01 to RWL-WTG-10.

Notes for setup:

- The statement is priced on the **turbine pad meters**, not on Valley Electric's interconnection meter: collection losses and station service are Ridgeline's, not the plant's.
- July 2024 was the first month. Ridgeline accounting made that statement by hand (sample enclosed with the bills); EEM's first generated statement should match it to the cent.
- Valley Electric separately credits the farm's export and moves the credit to the Central Plant's account (VED-BCT, on the Valley Electric sheet). The transfer price is the plant paying its own company; the bill credit is real money from the utility. They are different things; report both.
- WTG-07 was down from February 11 to April 22, 2025 with a failed gearbox. Its meter kept reporting zero, so those statements are lower; that is not an estimate and needs no adjustment.
- **Open:** confirm whether the research credit continues after the 2025 grant year.
